

Digital Get-Well Proposal

Toyota of Vero Beach & Kia of Vero Beach

Prepared for Jared Saunders, Owner Operator · Prepared by Leo Lebel, Circuit Coders · Date June 12, 2026

Executive Summary

Toyota of Vero Beach and Kia of Vero Beach are healthy businesses with a neglected digital presence. Across both stores you've earned roughly 8,700 Google reviews at 4.5+ stars — and that strength is being undermined by a layer of broken, fragmented, and unmanaged digital assets that your current marketing spend has not touched.

This proposal documents what's broken (every item independently verified June 12, 2026), what it's costing you, and a phased 90-day plan to fix all of it — followed by an ongoing program that defends and grows both rooftops for **\$6,000/month all-in, including your ad spend**. That's \$2,000/month less than your current spend, with more work delivered and full visibility into every dollar.

1 What We Found: The Technical Audit

1. Your Toyota homepage heading says "Visit DealerOn Toyota"

The main heading (H1) on verobeachtoyota.com — the most important on-page signal Google reads — currently says **"Visit DealerOn Toyota in Vero Beach, FL."** DealerOn is your website vendor. Their template placeholder was never replaced with your dealership's name. Google and every visitor have been shown the wrong business name, and no one managing your marketing noticed.

2. Identity fragmentation across the web

- **Multiple phone numbers in circulation per store** — five for Toyota and at least four for Kia across your own sites, Toyota.com's official locator, Yelp, Cars.com, and DealerRater. Google cross-references name/address/phone everywhere they appear; inconsistency at this scale suppresses the map-pack rankings that drive service appointments.
- Kia staff emails are published on **toyotaofvero.com** — **a dead domain that won't load**.

- **verobeachkia.com** — the most natural way a customer types the Kia store's name — serves a "Website Expired" error page.
- **DealerRater lists Kia of Vero Beach at the Toyota store's address.**
- An unclaimed Birdeye profile lists the dealership in "**Florida Ridge, MO**" — **the wrong city and state.**

3. No defense of your home market

You are the **only Toyota dealer in Vero Beach** — a genuine geographic moat. Meanwhile, Bev Smith Toyota (Fort Pierce) operates four dedicated, indexed "Toyota dealer near me" landing pages engineered to capture buyers from your side of the county line. Your sites have zero pages defending Vero Beach, Sebastian, or Indian River County searches.

4. Zero content presence

The Toyota blog is a dead link (it redirects to the About page). Between two rooftops, a service operation customers have favorited 23,000+ times on CARFAX, and 8,700+ reviews, you sit on more answerable customer-question material than nearly any business in the county — and none of it exists on your sites. Those searches currently resolve to Bev Smith, Melbourne dealers, and forums.

What's working (and stays): both DealerOn websites are Toyota/Kia-certified and structurally sound. **We are not proposing a website replacement.** Google review volume and ratings are excellent raw material — the problem is everything around them.

2 Reputation: Each Store on Its Own

We audited each rooftop's reputation separately, platform by platform. The pattern is identical at both stores: **strong where reviews accumulate on their own (Google), weak-to-broken everywhere that requires active management.**

Toyota of Vero Beach

PLATFORM	RATING	REVIEWS	STATUS
Google	~4.5	~5,718	Strong — your best asset
CARFAX	4.4	~2,490	Strong volume (77% five-star)
DealerRater	4.0	434	Middling, unmanaged
Facebook	~3.9	~143	Unmanaged
Cars.com	mixed	656	Unmanaged
Yelp	—	fragmented	Split across 3 listings, incl. a still-live legacy "Toyota Kia of Vero Beach" page
BBB	F	20 complaints / 3 yrs	Not accredited · only 5 of 20 complaints resolved · active licensing alert

The complaint pattern that matters: across BBB, DealerRater, CARFAX, and Cars.com, the recurring themes are finance-office disputes (financing terms changed after agreement, add-on products, slow warranty/GAP refunds) and service-pricing surprises (phone quote vs. counter price). Individual salespeople and advisors are consistently praised by name — the people are liked; the *processes* generate the complaints, and nobody is responding to any of it.

On the BBB licensing alert: the profile cites a "competency license" issue. You hold an active Florida dealer license (MV4029, valid through 9/2027) — this appears to be a BBB records gap, but it has sat on your profile unchallenged. It is fixable, and it should be fixed this month.

Kia of Vero Beach

PLATFORM	RATING	REVIEWS	STATUS
Google	4.6	~2,977	Strong — your best asset
KBB	4.6–4.7	—	Strong
Cars.com	~4	271	Decent, unmanaged
DealerRater	3.8	179	Listed at the Toyota store's address
Birdeye (service)	4.0	25	Unclaimed — you cannot respond
Yelp	2.5	52	Your worst public surface
CARFAX	no rating	0	Empty profile despite a "Lifetime Dealer" badge
Facebook	hidden	2 pages	Two competing pages splitting your audience
BBB	B+ (own profile)	16 complaints	Not accredited — and "Kia of Vero Beach" is also named on the F-rated Toyota profile, so BBB searches for the Kia store can surface the F

The complaint pattern that matters: the same two stories repeat across Yelp, Cars.com, and Google — advertised price vs. required add-on packages at signing, and a service-department alignment recommendation at low mileage that customers report second opinions contradicting. Whether or not these reflect policy, they are the dominant negative narrative on every platform where nobody from the store responds — and right now, nobody responds anywhere.

What this section tells you: your stores' reputations are not bad — they're **abandoned**. The high-volume platforms carry you; the managed platforms (where a response, a claim, or a corrected address is all it takes) are where the damage concentrates. Every item in both tables is addressable: claim, correct, consolidate, respond, and put a system behind review generation so the strong platforms keep compounding.

3 What This Costs You

BROKEN ASSET	BUSINESS IMPACT
BBB F + licensing alert on brand search	Trust collapse at the highest-intent moment: the pre-signing Google search
2.5★ Yelp (Kia), unanswered complaints everywhere	The negative narrative is the only voice speaking
NAP fragmentation, wrong addresses, dead domains	Suppressed map-pack rankings → lost service bookings and walk-ins
No local landing pages	Vero Beach and Sebastian buyers leak to Fort Pierce and Melbourne daily
Empty CARFAX (Kia), fragmented Yelp, duplicate Facebook	Earned reputation evaporating on platforms shoppers actually check
Placeholder H1, dead blog	Weakened relevance on your most important page; zero capture of research-stage shoppers

Service revenue makes this concrete: map-pack visibility drives service appointments, and service is the highest-margin, highest-frequency relationship you have. Every local-pack position lost is recurring revenue driving past your store.

4 The Get-Well Plan

Phase 0 — The Sprint (Weeks 1–2) · one-time \$2,500

1. Correct the Toyota homepage H1; audit every heading/meta on both sites (via your DealerOn dashboard — no site migration).
2. **BBB triage, both identities:** respond to all open complaints, open the rating-remediation path, resolve the licensing-record gap, and separate the Kia store's BBB identity from the F-rated entity profile.
3. Domain cleanup: redirect or retire toyotaofvero.com and verobeachkia.com; correct every staff-email reference.
4. One canonical phone scheme per store, corrected everywhere — including the Kia wrong-address DealerRater listing.
5. **Claim what's unclaimed:** both Birdeye profiles (fixing the "Missouri" address), consolidate the duplicate Kia Facebook pages, begin retiring the legacy "Toyota Kia" Yelp listing.
6. Baseline report: rankings, GBP insights, review velocity for both rooftops — every later claim of progress is measured against day zero.

Deliverable: every item in Parts 1 and 2 marked "fixable by claiming or correcting" is done within 14 days.

Phase 1 — Foundations (Days 15–45)

- Full citation cleanup across both rooftops (50+ directories and data aggregators).
- Google Business Profile takeover, both stores: services, categories, photos, Q&A seeding, weekly posts.
- **Review response system, every platform:** all new reviews answered within 24 hours — including negative ones, which is where shoppers actually look. Backlog of unanswered negatives addressed with a consistent, non-defensive voice.
- **Review generation engine:** post-sale and post-service prompts with store routing — pointed at the platforms that need volume: Kia's empty CARFAX and weak Yelp.
- Ad accounts restructured under **dealership-owned accounts** (your billing, your data, our management).

Phase 2 — Offense (Days 45–90)

- Defensive local pages: Vero Beach, Sebastian, Indian River County × sales/service/parts intent — the wall against Bev Smith's near-me strategy.
- Content engine launch: 4 pieces/month answering the questions your customers already ask, each targeted at searches currently resolving to competitors.
- Paid search live under the new account structure: branded defense + service/offers campaigns, geo-fenced to your market.

Ongoing (Month 4+)

Monthly cadence per rooftop: GBP posts and full review management · 2+ local/content pages · ad management and optimization · rank, GBP, and review-velocity reporting · quarterly competitive audit (we watch Bev Smith and the Melbourne dealers so you don't have to).

5 Reporting: You See Everything

Every month, one report per rooftop, in plain English:

- Local rankings for the keywords that matter, tracked from Vero Beach, Sebastian, and Fort Pierce
- GBP performance: calls, direction requests, website clicks
- Review velocity and rating trend, platform by platform — including Yelp and CARFAX recovery at the Kia store
- **Ad spend to the penny** — what was spent, where, and what it returned
- BBB status, both profiles, until the F is gone

The accounts are yours, the dashboards are yours, and you can audit every dollar any month you choose.

6 Investment

	CURRENT VENDOR	CIRCUIT CODERS
Monthly cost	\$8,000 (opaque bundle)	\$6,000 all-in, including ad spend
Ad spend visibility	None	Full — your accounts, reported monthly
Committed media floor	Unknown	Minimum \$3,000/mo into ads, guaranteed
GBP management (2 stores)	Not evidenced	Included
Reputation management (BBB, Yelp, all platforms, 2 stores)	Not happening	Included
Local landing pages + content	None exist	Included
Contract	—	Month-to-month, 30-day notice

One-time Get-Well Sprint: \$2,500 — Weeks 1–2, Phase 0 scope

Ongoing program: \$6,000/month — both rooftops, everything in this document, ad spend included with a guaranteed \$3,000/month media floor

Annual difference vs. today: \$24,000 saved — while adding two managed reputations, two managed Google Business Profiles, local-page defense, and a content engine that don't exist today.

The month-to-month term is the guarantee: if the monthly reports don't show progress, you leave with 30 days' notice. We keep the account by performing, not by contract.

Scope note: OEM co-op (TDA) advertising channels that require Toyota/Kia-certified vendors remain as-is; this program covers search, local, and social media plus all organic and reputation work. We'll review your co-op structure in Phase 1 and tell you honestly what should stay where.

7 Next Steps

1. A 15-minute screen share — every finding in Parts 1 and 2 shown live on your own properties.
2. You approve the Sprint (\$2,500). Fixes begin within 48 hours.
3. Day 14: Sprint review against the baseline report. The ongoing program starts on your go.
